INTERNATIONAL PRELIMINARY EXAMINATION REPORT

(PCT Article 36 and Rule 70)

Applicant's or agent's file reference 02/009 WO	FOR FURTHER ACTION See Notification of Transmittal of International Preliminary Examination Report (Form PCT/IPEA/416)						
International application No.	International filing date 15 January 2003	• •	Priority date (<i>day/month/year</i>) 29 January 2002 (29.01.2002)				
PCT/CH2003/000018			29 January 2002 (29.01.2002)				
International Patent Classification (IPC) or national classification and IPC F01D 25/28, F02C 6/12							
Applicant ABB TURBO SYSTEMS AG							
This international preliminary examination report has been prepared by this International Preliminary Examining Authority and is transmitted to the applicant according to Article 36.							
2. This REPORT consists of a total of	sheets,	including this cover s	neet.				
This report is also accompanied by ANNEXES, i.e., sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions under the PCT).							
These annexes consist of a total of sheets.							
3. This report contains indications rela	ting to the following iter	ms:					
I Basis of the report	I 🔀 Basis of the report						
II Priority							
III Non-establishment	of opinion with regard to	novelty, inventive st	ep and industrial applicability				
IV Lack of unity of inv	vention

	* Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rule 70.16 and 70.17).								
**	** Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.								

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/CH 03/00018

v.	Reasoned statement under Article 3 citations and explanations supporti	35(2) with regard to not ng such statement	velty, inventive step or industrial applic	ability;
1.	Statement			
	Novelty (N)	Claims	1-13	YES
		Claims		NO
	Inventive step (IS)	Claims	1-13	YES
		Claims		NO
	Industrial applicability (IA)	Claims	1-13	YES
		Claims		NO

- 2. Citations and explanations
 - 1. Reference is made to the following documents:

D1: US-A-3 891 345 (DOOLIN JOHN H.) 24 June 1975

D2: EP-A-0 785 389 (DRESSER RAND CO) 23 July 1997

D3: DE 44 32 073 A (ABB MANAGEMENT AG) 14 March 1996

2. D1 is considered to be the closest prior art. With regard to claim 1, D1 discloses (the references in parentheses refer to said document) a fixing device for fixing a turbocharger comprising a turbocharger housing to a base (19), having a first and a second foot (26, 28), which can be secured in the base, the two feet (26, 28) being connectable to the turbocharger housing (see figure 4) mutually spaced apart in an axial direction (see figure 1), and the second foot (28) comprising a housing-connecting section (34), which can be connected to the turbocharger housing and is in the form of at least a partial arc (column 3, lines 7-8), a baseconnecting section (44, 46), which is axially (see figures 1 and 4) spaced apart from the housingconnecting section and can be connected to the base (19), and an axial diagonal support (32), which mutually connects the two connecting sections and

forms with the base (19) an angle α (see figures 1, 4 and 7), which is in the range from 0° to 6° (see claim 3).

The subject matter of claim 1 differs therefrom in that the housing-connecting section comprises an arcuate axial stop which can be positively connected to the turbocharger housing in an axial direction.

The problem addressed by the present invention can therefore be considered that of producing as rigid a connection as possible between the turbocharger and the second foot.

The stop on the housing-connecting section of the second foot makes the fixing device more rigid as a result of the positive axial attachment between the foot and the turbocharger. The axial stop is not therefore just a design measure to make assembly easier. The axial stop is, furthermore, not to be found in either D2 or D3.

Independent claim 1 is therefore novel and involves an inventive step (PCT Article 33(2) and (3)).

- 3. Dependent claims 2-13 are therefore also novel and involve an inventive step.
- 4. Contrary to the requirements of PCT Rule 5.1(a)(ii) neither the relevant prior art disclosed in document D2 nor this document is indicated in the description.
